Flow of Funds Summary Statistics

First Quarter 2009

Debt of the domestic nonfinancial sectors is estimated to have expanded at a seasonally adjusted annual rate of 4 percent in the first quarter of 2009, about 2 percentage points less than in the previous quarter. The deceleration was concentrated in the business and federal government sectors.

Household debt contracted for the second consecutive quarter, although at a slower pace than in the fourth quarter of 2008. In the first quarter, home mortgage debt growth was about zero, while consumer credit contracted at an annual rate of 3½ percent, similar to the rate in the fourth quarter.

Nonfinancial business debt decreased ¼ percent at an annual rate in the first quarter, its lowest growth rate since early 1993. The slowdown was concentrated in commercial paper, loans, and commercial mortgage borrowing.

State and local government debt increased at an annual rate of 5 percent last quarter, following a small decline during the previous quarter. Federal government debt growth slowed to 23 percent in the first quarter, following two quarters of growth rates of nearly 40 percent.

At the end of the first quarter of 2009, the level of domestic nonfinancial debt outstanding was \$33.9 trillion; household debt was \$13.8 trillion, nonfinancial business debt was \$11.2 trillion, and total government debt was \$9.0 trillion.

Household net worth—the difference between the value of assets and liabilities—was an estimated \$50.4 trillion at the end of the first quarter of 2009, \$1.3 trillion dollars less than at the end of 2008.

Flow of Funds Accounts, First Quarter 2009

This publication presents the flow of funds accounts for 2009:Q1.

Data revisions and other changes. The statistics in the attached tables reflect the use of new or revised source data. Most significant revisions appear in recent quarters; however, new source information resulted in changes to data for earlier periods.

1. Assets of the nonfarm nonfinancial corporate business sector (tables F.102 and L.102) have been revised from 2007:Q1 onward to reflect advance data from the Internal Revenue Service (IRS) Statistics of Income (SOI) for 2007.

2. The monetary authority sector (tables F.108 and L.108) has been expanded to show new asset detail for bank loans n.e.c. related to the creation of the Term Asset-Backed Securities Loan Facility (TALF).

3. The bank holding company sector (tables F.112 and L.112) has been revised to include a number of large financial companies – including Goldman Sachs, Morgan Stanley, CIT Group, American Express, GMAC, Discover Financial Services, and IB Finance – that became bank holding companies in 2008:Q4 and 2009:Q1. Balance sheet data for these firms became available in 2009:Q1.

4. The credit unions sector (tables F.115 and L.115) was modified to include an additional asset category, reserves at the Federal Reserve.

5. The private pension fund sector (tables F.118, L.118, F.118.c, and L.118.c) has been revised from 2002:Q4 forward to reflect improved methodology in using College Retirement Equities Fund (CREF) data.

6. The state and local government employee retirement funds sector (tables F.119 and L.119) was revised from 2006:Q3 forward to reflect new data from the Census Bureau.

7. The finance companies sector (table F.127 and L.127) was modified to include other loans and advances as an additional liability category, reflecting loans made to Chrysler Financial by the federal government under the Troubled Assets Relief Program (TARP).

8. The funding corporation sector (tables F.130 and L.130) was modified to include an additional asset

category, security RPs, and an additional liability category, other loans and advances, to reflect transactions between the federal government and the Term Asset-Backed Securities Loan Facility (TALF) LLC.

9. Detail for foreign direct investment (tables F.229 and L.229) has been revised from 1992:Q4 forward to reflect a reevaluation of the detail by sector.

10. The balance sheet of households and nonprofit organizations with equity detail (table B.100.e) has been expanded to show quarterly data.

Explanatory notes for tables D.1, D.2, and D.3.

Domestic debt comprises credit market funds borrowed by U.S. entities from both domestic and foreign sources, while foreign debt represents amounts borrowed by foreign financial and nonfinancial entities in U.S. markets only. Financial sectors consist of government-sponsored enterprises, agency- and GSE-backed mortgage pools, and private financial institutions. Credit market debt consists of debt securities, mortgages, bank loans, commercial paper, consumer credit, U.S. government loans, and other loans and advances; it excludes trade debt, loans for the purpose of carrying securities, and funds raised from equity sources.

Growth rates in table D.1 are calculated by dividing seasonally adjusted flows from table D.2 by seasonally adjusted levels at the end of the previous period from table D.3. Seasonally adjusted levels in flow of funds statistics are derived by carrying forward year-end levels by seasonally adjusted flows. Growth rates calculated from changes in unadjusted levels printed in table L.2 can differ from those in table D.1.

Relation of Flows to Outstandings. Estimates of financial assets and liabilities outstanding are linked to data on flows. However, figures on outstandings contain discontinuities or breaks in series that could affect analysis of particular relationships over time. Specifically, outstanding in the flow of funds accounts are related to the flows in the following way:

$$\text{Outstanding}_t = \text{Outstanding}_{t-1} + \text{Flow}_t + \text{Discontinuity}_t$$

where “t” is the time period.

Discontinuities result from changes in valuation, breaks in source data, and changes in definitions. For most series, the value of the

discontinuity is zero for nearly all time periods. However, in a few instances, the discontinuity is nonzero for almost all time periods, or is quite large in a particular quarter, such as a period when there is a sharp increase or decrease in equity prices or a major break in source data.

The discontinuities in a series can distort estimated rates of growth in assets and liabilities between periods. In order to minimize these distortions, percentage changes in assets and liabilities in flow of funds releases should be calculated as:

$$\text{Percentage change}_t = (\text{Flow}_t / \text{Outstanding}_{t-1}) * 100$$

Preliminary Estimates. Figures shown for the most recent quarter in these tables are based on preliminary and incomplete information. A summary list of the principal sources of information available when the latest quarter's data were compiled is provided in a table following this introduction. The distinction between “available” data and “missing” data is not between final and preliminary versions of data, but rather between those source estimates that are fully ready when the latest quarterly publication is compiled and those that are not yet completed. However, the items that are shown as available are, in general, also preliminary in the sense that they are subject to revision by source agencies.

Margins of Uncertainty. Flow of funds statistics are subject to uncertainties resulting from measurement errors in source data, incompatibilities among data from different sources, potential revisions in both financial and nonfinancial series, and incomplete data in parts of the accounts. The size of these uncertainties cannot be quantified in precise statistical terms, but allowance for them is explicitly made throughout the accounts by the inclusion of “discrepancies” for various sectors and instrument types. A discrepancy for a sector is the difference between its measured sources of funds and its measured uses of funds. For an instrument category, a discrepancy is the difference between measured funds borrowed through the financial instrument and measured funds lent through that instrument. The size of such discrepancies relative to the main asset or liability components is one indication of the quality of source data, especially on an annual basis. For quarterly data, differences in seasonal adjustment procedures for financial and nonfinancial components of the accounts sometimes result in discrepancies that cancel in annual data.

Availability of Data. Flow of funds statistics are updated about ten weeks following the end of a quarter. This publication — the Z.1 release — is available from the Board's Publications Services. Flow of funds data are also available electronically through the Internet at the following location:

www.federalreserve.gov/releases/Z1

The Internet site also provides quarterly data beginning in 1952, organized in compressed files that correspond to the tables published in this release. There are files for quarterly data for seasonally adjusted flows, unadjusted flows, outstandings, balance sheets, and debt (tables D.1, D.2, and D.3). This data is also available as a customizable download dataset through the Data Download Program (DDP) at the following location:

www.federalreserve.gov/datadownload/Choose.aspx?rel=Z.1

A *Guide to the Flow of Funds Accounts* is available. The 1,200-page *Guide*, published in two volumes in January 2000, explains in detail how the U.S. financial accounts are prepared and the principles underlying the accounts. The *Guide* can be purchased for \$20.00 from the Board's Publications Services. Publications Services accepts orders accompanied by checks as well as credit card orders.

The Internet site for this release at the location shown above contains a link to an order form for the *Guide* that can be mailed or faxed to Publications Services. In addition, the Internet site includes a link to the *Guide's* descriptions of the tables in the flow of funds accounts.

General notes: A = assets; L = liabilities. Domestic nonfinancial sectors (columns 9 and 10) are households and nonprofit organizations, nonfinancial business, state and local governments, and federal government. Equity included in line 2 is the sum of corporate equities (line 25) and equity in noncorporate business (line 32). The matrix shows a discrepancy in column 17 for monetary gold and SDRs (line 4) because by international accounting convention, such instruments are financial assets without corresponding liabilities.
